

Question 1

Objective: Create a React component called **StudentCard**.

Requirements

- Display:
 - Student Name
 - Course Name
 - Email Address
 - Use **props** to pass the data.
- Display the information inside a styled card.

```
App.jsx  StudentCard.jsx  App.css
Assessment > Question1 > studentcard > src > components > StudentCard.jsx > StudentCard
1  /**
2   * StudentCard
3   * Displays a student's name, course, and email.
4   *
5   * Props:
6   * - name (string) : Student's full name
7   * - course (string) : Course name
8   * - email (string) : Email address
9   */
10
11  Tab to Jump
12  function StudentCard(props) {
13    const {name, course, email} = props;
14
15
16    return (
17      <div className="card">
18        <h2>{name}</h2>
19        <p>Course: {course}</p>
20        <p>Email: {email}</p>
21      </div>
22    );
23  }
24
25
26  export default StudentCard;
27
```

```
App.jsx  StudentCard.jsx  App.css
Assessment > Question1 > studentcard > src > App.jsx > App
1  import StudentCard from './components/StudentCard'
2  import './App.css'
3
4  function App() {
5    return (
6      <div className="app-container">
7        <StudentCard
8          name="Johnny Chua"
9          course="Frontend Web Development"
10         email="[EMAIL_ADDRESS]"
11        />
12      </div>
13    )
14  }
15
16  export default App
```
